

Project Experience

Instrumentation, Controls, and Electrical (IC&E) Support Services

City of Gallup, Gallup, NM

As a subconsultant to Camp Dresser & McKee, Inc. (CDM), Timberline staff provided construction observation services for the instrumentation, controls, and electrical (IC&E) work associated with construction of major improvements to the existing Wastewater Treatment Plant for the City of Gallup, NM. This project involved review of project documents, frequent site visits and documentation of onsite observations. As a result of this work, Timberline identified several situations in which National Electrical Code (NEC) guidelines were being violated. These violations were identified early enough in the project to save major rework.
