

## Project Experience

### Water/Wastewater SCADA System Design and Construction Support Services Santa Ana Pueblo, Bernalillo, NM

Timberline was a subconsultant to Boyle Engineering Corporation for SCADA system support on a water system improvement project for the Santa Ana Pueblo, a sovereign political nation. Also, Timberline was a subconsultant to Wilson & Company for integration of design of Wastewater Treatment Plant process controls in this new water/wastewater SCADA system. This project involved SCADA master station at the wastewater plant and instrumentation, automatic controls and PC-based operator interfaces for three sewer lift stations, two water production wells and a storage facilities. Timberline services included planning and design support to Public Service Co. of New Mexico (PNM) Water Services, which, at the time of the project, was acting as the Pueblo's managing agent for infrastructure design, development and O&M as the tribe establishes recreational facilities and tourist enterprises on the pueblo.
